

AtomTracker

In-House Goal Setting & Tracking Portal — replaces fragile Excel sheets with 100% weight enforcement, quarterly scoring & audit trail.

■ First load may take ~30 s — backend sleeps on Render free tier. App auto-retries.

2 Problem Statement & Solution

Atomberg's goal-setting ran on fragile Excel sheets — no weight validation, no audit trail, no digital manager review cycle. AtomTracker is the structured digital replacement.

■ **Structured Goal Setting**

Up to 8 goals/sheet. Weight enforced at exactly 100%. Supports Min/Max/Zero/Timeline UoMs with automatic

■ **Quarterly Check-ins**

Employees log Q1–Q4 actuals on locked sheets. Scores computed per UoM. Managers add per-check-in feedback.

■ **Cascaded Goals**

Admin pushes a primary goal to multiple employees. Copies sync actuals from the primary — no duplication.

■ **Manager Approval Flow**

Managers review, inline-edit target/weight, approve & lock, or return with a rework comment. Full round-trip in

■ **Tamper-Evident Audit**

Every change logged with old/new values, timestamp, actor. Admin searches by entity UUID.

■ **Org Analytics**

Charts: users by role, sheets by status, QoQ score trend, per-employee completion matrix. CSV export.

3 System Architecture

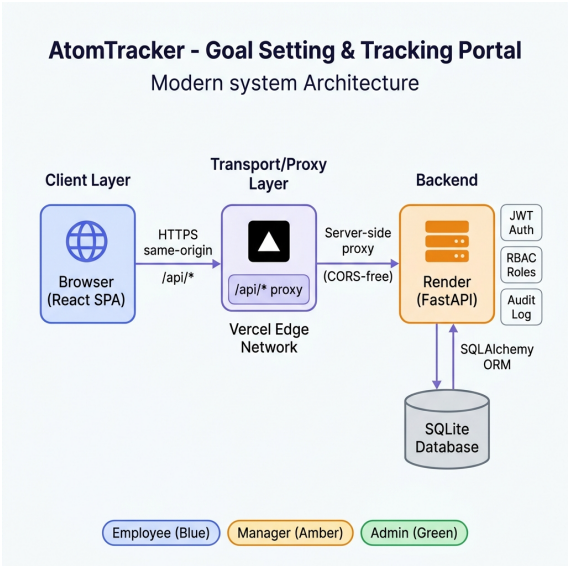

Figure 1 — Browser → Vercel Proxy → FastAPI (Render) → SQLite

Architecture Decisions

Component	Technology	Purpose
Frontend	React 19 + Vite + Tailwind v4	SPA on Vercel CDN
Proxy	Vercel /api/* rewrite	Server-side proxy — eliminates CORS

Backend	FastAPI + Uvicorn on Render	Stateless REST API
Database	SQLite via SQLAlchemy 2	Zero-config; Postgres-ready via env var
Auth	PyJWT HS256 + bcrypt	Signed 12-hr tokens, role checked server-side

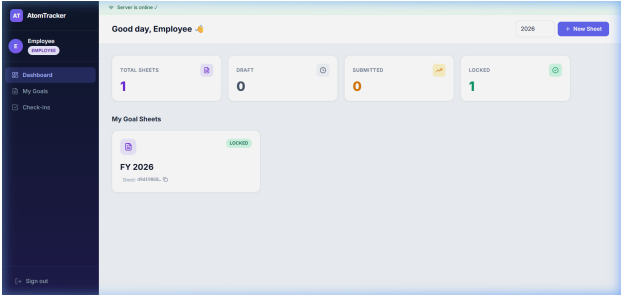

4 BRD Feature Coverage

Requirement	Status	Endpoint
Three roles (Employee / Manager / Admin) with RBAC	■	auth.require_role
Up to 8 goals, min weight 10, total = 100	■	POST /sheets/{id}/goals + /submit
Manager approves & locks the sheet	■	POST /sheets/{id}/approve
Manager returns sheet with rework comment	■	POST /sheets/{id}/reject
Manager inline edits target/weight pre-approval	■	POST /goals/{id}/override
Quarterly check-ins with auto-scored UoMs	■	POST /goals/{id}/checkins
Manager comments on a specific check-in	■	POST /checkins/{id}/comment
Shared/cascaded goals (actuals sync)	■	POST /goals/{id}/cascade
Admin override of locked goals + audit trail	■	POST /goals/{id}/override
Per-employee × quarter completion matrix	■	GET /completion
Full audit trail explorer (entity + global)	■	GET /audit-logs/{id}]
CSV achievement report export	■	GET /reports/achievements.csv
Org analytics (roles, status, QoQ trend)	■	GET /analytics, /analytics/qoq
